

## Introduction

The Asset Finder Tool assists users in locating the necessary assets from ELB's proprietary Asset Library. Users can have a conversation with the AI tool and it guides them through the search.

## Key Features

- **Supports Image, Video and Audio Assets:** The tool support to search for image,video and audio assets seamlessly.
- **Conversational Mode:** Each search displays 6 likely results. There is an option to get additional assets for the same set of keywords using the “Show More” option.
- **Download Assets:** Users can download media files directly to their local machines.
- **Video Playback:** Hover on video assets will play the video for five seconds. The video can be fully played after it is opened as a separate modal window.
- **Audio Preview:** Hovering over the thumbnails of audio assets will play the sound.
- **Retaining the Search History:** The tool remembers the search history in any particular user’s browser. The user can navigate to other tools and come back to refer to the previously searched assets. The history can be cleared using the Reset button.
- **Speech-to-Text Prompt:** Added support to create search keywords using speech. Best supported in Chrome and Safari browsers.

### 1. Default state

⬅

ⓘ All the assets are sourced from ELB's proprietary library with necessary copyrights. These are not from the internet or generated by AI

Example

💡 I need images for a course I am developing on water treatment. Show me only high res images.

Example

💡 Show me videos depicting women carrying water in a desert

Example

💡 I need cut out people. I am specifically looking for African American female models in a business suite
