

Introduction

The Avatar Generator Tool is a user-friendly wizard that simplifies the creation of avatar videos from just typed out audio text. Powered by an advanced AI engine, it transforms static voice over text into engaging, high-quality videos with just a few clicks. The tool offers flexible options to ensure your content stands out.

Key Features

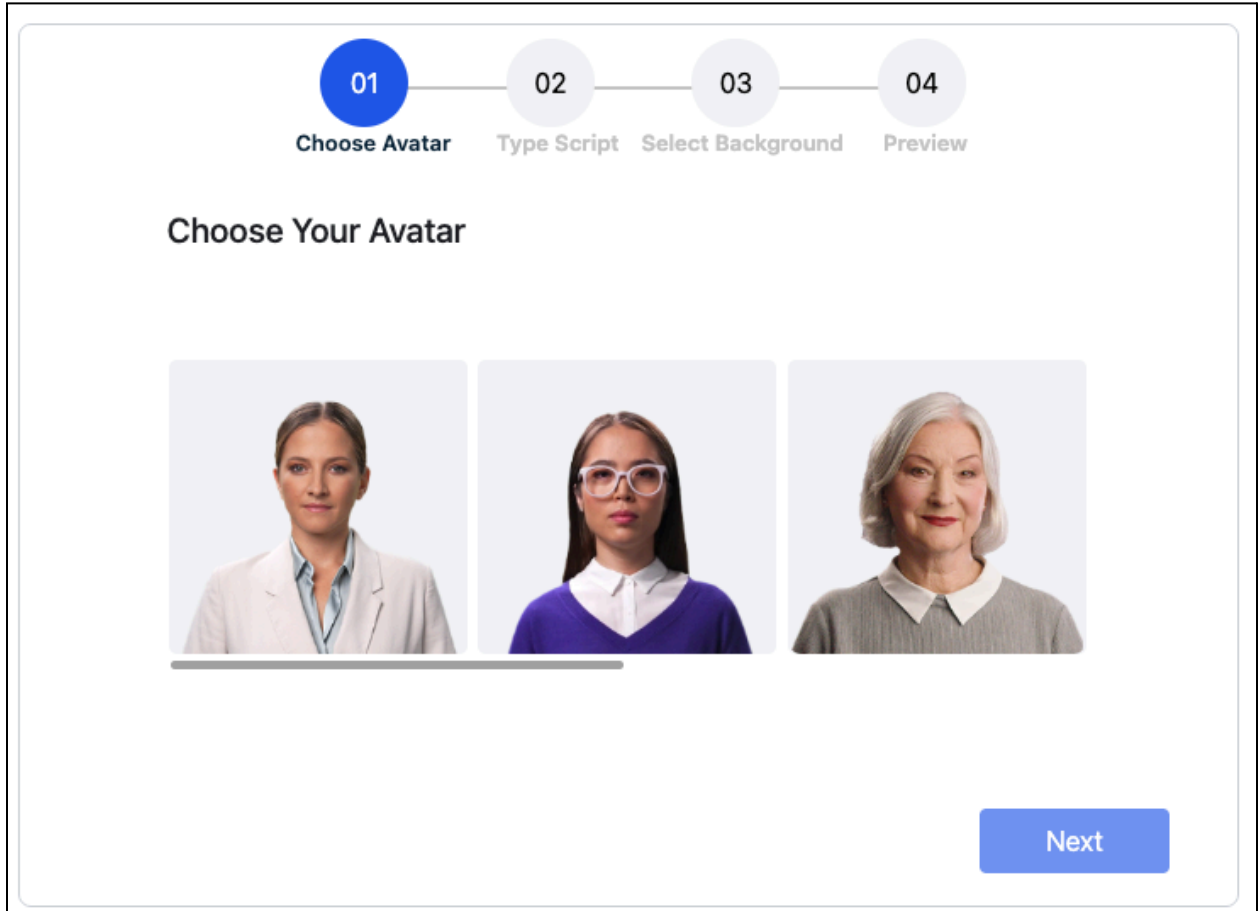

- Choose from a list of pre-listed real life avatars, including both male and female characters.
- Adjust the audio quality to meet your needs.
- Supports audio streaming, allowing you to preview content without converting the entire video.
- Change the video background by selecting from various available options.

Input Requirements

Name	Details	Required	Limitations
Choose Avatar	Select from the list	Yes	Pre defined list of characters
Input text	Input for the video content	Yes	750 words
Variability	Adjust the selected voice variance	Yes	Default it is selected and move the slider to preview.
Video Background	List of images which can be set as a background for video avatar	Yes	Only from the predefined list of video backgrounds

Screenshots

1. Choose Your Avatar

2. Type your Input, Audio settings and Generate Audio

The screenshot displays a four-step process: 01 Choose Avatar, 02 Type Script, 03 Select Background, and 04 Preview. Step 02 is active. The 'Type Your Script' section contains a text area with the following text: "Addressing these challenges requires a multi-faceted approach that includes advocating for policy changes, raising awareness, and building supportive networks. It also involves empowering individuals to recognize and challenge the barriers they face." Below the text is a word count of 86/750 words. To the right, a 'Variability' slider is set to 50, with a 'Generate Audio' button. Below the slider is a 'Generated Audio' player showing a play button, a progress bar at 0:00 / 0:00, a volume icon, and a menu icon. At the bottom are 'Previous' and 'Next' buttons.

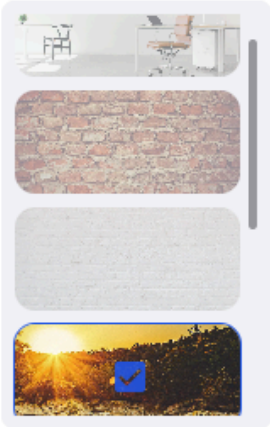

3. Audio Variability Settings

The audio's speed and tone can be adjusted using the sliders. The changes can be previewed before proceeding to the next step.

4. Select Video Background

Download the Output

- Once the video is processed, it will be loaded for previewing. A download option will be enabled once the video is ready, allowing you to download and repurpose it for your desired applications.

Additional Information

- The video conversion time depends on the length of the content. The video is processed on the server and will be returned once it is ready.
